8A8Z-2001-A Ceramic Ford Edge Brake Pads D1376 Auto Brake Replacement

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: OEM
- Certification: ISO9000
- Model Number: ALL
- Minimum Order Quantity: 100
- Price: 5.00-25.00
- Packaging Details: export packing
- Delivery Time: 30-60
- Payment Terms: T/T, LC
- Supply Ability: 15 Million

Product Specification

- Product Name: Ford Edge Ceramic Brake Pad
- Model: Ford Edge
- Type: Brake Pad
- Material: Ceramic
- Factory No.: ZK-10014
- F/R: F
- FMSI: D1376
- OEM: 8A8Z-2001-A
- Braking System: N
- Highlight: **8A8Z-2001-A auto brake replacement**, **8A8Z-2001-A ford edge brake pads**, **8A8Z-2001-A**

Product Description

Specifications	
Product name	Ford Edge Ceramic Brake Pad
Model	Ford Edge
Type	Brake Pad
Material	Ceramic
F/R	F
Factory No.	ZK-10014
FMSI	D1376
OEM	8A8Z-2001-A
Braking System	N
Size	
Width	195.4 mm
Height	54.4 mm
Thickness	17.9 mm
Model_MARKE	Ford Edge 2009-

On the path to excellence, the Ford Edge Ceramic Brake Pad D1376 epitomizes the perfect synergy of engineering and performance. Crafted with an advanced ceramic formula, it not only ensures superior braking power but also significantly reduces noise and dust during braking events. The unique composition of materials offers exceptional heat resistance and a longer lifespan, making it an ideal choice for Ford Edge owners.

In measuring the quality of brake pads, we look beyond thickness to consider resistance to high temperatures and even wear. The design of the D1376 brake pads ensures consistency and reliability under extreme conditions, whether navigating through busy urban traffic or cruising on open country roads, delivering steadfast braking power. Each act of braking with these pads is a fulfillment of a commitment to safety.

Our ceramic brake pads, crafted from a specially formulated ceramic blend, showcase exceptional performance owing to their unique material composition.
The manufacturing process adheres to the rigorous standards of international certification IATF-16949, ensuring the utmost reliability in product quality.
Withstanding temperatures of up to 640°C, our ceramic brake pads offer a reliable safeguard for braking needs under diverse driving conditions.
Employing original high-precision molds and specialized heat treatment techniques, we guarantee the precision and stability of our products.
Addressing brake squeal concerns, our pads boast a friction coefficient of PS 0.35, coupled with heat resistance up to 640°C, maintaining outstanding braking performance even in high-temperature environments. This prolongs lifespan and effectively resolves brake squeal issues.
Prioritizing safety and comfort, our stable friction coefficient preserves brake disc integrity, while the comfortable pedal feel and low-noise design enhance driving pleasure and reduce environmental pollution.
Featuring unique chamfered edges, our pads not only reduce braking noise but also enhance compatibility with counterpart components, further elevating braking performance.
Exceptional heat dissipation performance is achieved through high-temperature and high-pressure burnishing, reducing bedding-in periods and minimizing noise occurrences, thereby enhancing pad cooling efficiency and ensuring braking stability and safety.
Designed for lightweight, our ceramic brake pads, compared to traditional metal ones, effectively reduce vehicle load, improving fuel economy and power performance.
Minimizing brake dust, our ceramic brake pads produce less dust compared to their metal counterparts, making them environmentally friendly and less intrusive to the cleanliness of the vehicle surroundings and wheels.
Quality assurance is paramount to us. Through stringent quality controls and continuous research and development efforts, we ensure the stability and reliability of each ceramic brake pad, earning the trust and acclaim of our users.
