Basic Information

- Brand Name: ZKZB
- Model Number: ZK-11011

Product Specification

- Silent Design: Chamfer Design
- Thickness: 12 Mm
- Numberofpads: 4
- Accessories: Yes
- Wearindicator: Included
- Guarantee Peroid: 30000-50000km
- Weight: 1.2 Kg
- Color: Black

Product Description:

The Disc Brake Pad Set is a high-quality replacement component designed to provide reliable and efficient braking performance for a wide range of vehicles. Crafted from semi-metallic material, these brake pads offer an excellent balance of durability, heat resistance, and stopping power, making them an ideal choice for drivers seeking a dependable braking solution. With a thickness of 12 mm, these pads ensure long-lasting wear and consistent performance, even under demanding driving conditions.

One of the standout features of this Disc Brake Pad Set is its impressive guarantee period, covering a distance of 30,000 to 50,000 kilometers. This extensive warranty reflects the manufacturer's confidence in the product's durability and quality. Drivers can enjoy peace of mind knowing that their investment is protected and that the brake pads will maintain optimal performance over a significant mileage range.

The set includes four brake pads, perfectly suited for a complete axle replacement, ensuring balanced and uniform braking on both sides of the vehicle. Having four pads in the set makes installation straightforward and convenient, as users can replace all the pads at once rather than doing it incrementally. This comprehensive approach helps maintain even wear and enhances overall braking safety.

In addition to the brake pads themselves, this set comes with essential accessories to facilitate a smooth and hassle-free installation process. The included accessories typically consist of hardware clips, shims, and sometimes brake pad grease, which are crucial for reducing noise, preventing vibration, and ensuring the pads fit securely within the brake caliper assembly. These accessories contribute significantly to the longevity and quiet operation of the brake system.

While these semi-metallic pads offer robust performance, they are also designed to be compatible with good ceramic brake pads, allowing drivers to choose the best option for their driving style and vehicle requirements. Ceramic brake pads are known for their quieter operation and less brake dust production compared to conventional pads, making them a popular choice among many car owners.

Whether you prefer the semi-metallic set or want to explore ceramic brake pad alternatives, this Disc Brake Pad Set is engineered to provide excellent compatibility and performance.

For those who prefer to perform their own brake maintenance, having the correct brake pad tool is essential. This Disc Brake Pad Set can be installed efficiently with standard brake pad tools, which help retract the caliper piston and secure the pads in place. Using the right brake pad tool not only simplifies the replacement process but also ensures that the brake system functions correctly after installation.

This reduces the risk of premature wear or brake noise, enhancing the overall driving experience.

In summary, the Disc Brake Pad Set combines quality construction, practical design, and comprehensive accessories to deliver a reliable braking solution. The semi-metallic material offers a strong, heat-resistant brake pad that performs well across various driving conditions, while the 12 mm thickness ensures longevity. The inclusion of four pads and necessary accessories provides everything needed for a complete and efficient brake job. With a guarantee period spanning 30,000 to 50,000 kilometers, this product stands out as a trustworthy option for drivers seeking safety, performance, and value. Whether paired with good ceramic brake pads or installed on its own, this set meets the needs of those looking for durable, effective braking components with professional-grade compatibility and ease of installation using the proper brake pad tool.

Features:

- Product Name: Disc Brake Pad Set
- Type: Parking Brake
- Silent Design: Chamfer Design for reduced noise
- Wear Indicator: Included for easy maintenance
- Friction Coefficient: 0.35 - 0.45 for reliable braking performance
- Thickness: 12 mm for durability and long-lasting use
- High-quality ceramic brake pads for improved heat dissipation and reduced brake dust
- Compatible with disc brake pads systems
- Includes brake pad tool for easy installation and removal

Technical Parameters:

Package Quantity	1 Set (4 Pieces)
Number of Pads	4
Length	7.6 Inches
Material	Semi-metallic
Guarantee Period	30000-50000km
Accessories	Yes
Wear Sensor Included	Yes
Silent Design	Chamfer Design
Thickness	12 Mm
Friction Coefficient	0.35 - 0.45

This set of disc brake pads offers excellent performance with a semi-metallic composition, ensuring durability and reliability. As good ceramic brake pads, they feature a chamfer design for silent operation and include wear sensors and accessories for easy installation. These ceramic brake pads provide a friction coefficient between 0.35 and 0.45, guaranteeing safe and efficient braking over a guarantee period of 30000-50000km.

Applications:

The ZKZB Disc Brake Pad Set, model number ZK-11011, is an ideal choice for a wide range of driving occasions and scenarios. Manufactured in China, these brake pads are designed to deliver reliable performance and safety, making them suitable for both everyday commuting and more demanding driving conditions. Whether you are navigating city streets, tackling mountainous terrain, or cruising on highways, the ceramic brake pad composition ensures consistent braking power with a friction coefficient ranging from 0.35 to 0.45. This range offers optimal stopping power while maintaining smooth and controlled deceleration.

One of the standout features of the ZKZB ZK-11011 brake pads is their silent design, achieved through the chamfer design that minimizes noise and vibration during braking. This makes the brake pad set perfect for urban environments where noise reduction is appreciated, as well as for long road trips where comfort is a priority. The inclusion of wear sensors and wear indicators provides an added layer of safety and convenience, alerting drivers when it's time to replace the pads, thereby preventing brake failure and extending the lifespan of the braking system.

This disc brake pad set includes four pads, making it suitable for replacement on both front and rear wheels, depending on the vehicle's specifications. The product is engineered to meet or exceed OEM brake pads standards, offering a reliable aftermarket option that guarantees compatibility and performance similar to original equipment. The ZKZB brake pads are particularly advantageous for drivers seeking OEM brake pads quality without the premium price, ensuring a balance between cost and performance.

In summary, the ZKZB Disc Brake Pad Set ZK-11011 is perfect for a variety of application occasions—from daily urban driving and highway cruising to more intense braking scenarios such as emergency stops and heavy load conditions. Its ceramic brake pad material, silent chamfer design, and integrated wear sensors make it a comprehensive solution for anyone looking to enhance their vehicle's braking system with dependable and quiet OEM brake pads.

Customization:

Our ZKZB Disc Brake Pad Set, model number ZK-11011, offers premium product customization services to meet your specific needs. Manufactured in China, these brake pads feature a thickness of 12 mm and are made from semi-metallic material known as the best brake pad material for durability and performance. The friction coefficient ranges between 0.35 and 0.45, ensuring reliable stopping power. Available in black, these pads include a wear sensor for added safety and convenience. Whether you are looking for the best ceramic brake pads alternative or require a brake pad tool for installation, our customization services ensure that each set is tailored to provide optimal fit and function.
